

DISCLOSURE ON LIQUIDITY COVERAGE RATIO AS ON 30.06.2023

Liquidity Coverage Ratio (LCR) guidelines were implemented by the Banks with an objective to maintain adequate level of unencumbered High Quality Liquid Assets (HQLAs) that can be converted into cash to meet its liquidity needs for a time-horizon upto 30 calendar days under a significantly severe liquidity stress scenario.

$$LCR = \frac{\text{Stock of High-Quality Liquid Assets (HQLAs)}}{\text{Total Net Cash Outflows over the next 30 calendar days}}$$

HQLA comprise of liquid assets that can be readily encashed or used as collateral to obtain cash in a range of stress scenarios. There are two categories of assets included in the stock of HQLAs, viz. Level 1 and Level 2 (Level 2A and Level 2B) assets. While Level 1 assets are with 0% haircut, Level 2A and Level 2B assets are with 15% and 50% haircuts respectively. Total Net Cash Outflows is computed as the total expected cash outflows minus total expected cash inflows for the subsequent 30 calendar days. Total expected cash outflows are calculated by multiplying the outstanding balances of various categories or types of liabilities and off-balance sheet commitments by the rates at which they are expected to run-off or be drawn down. Total expected cash inflows are calculated by multiplying the outstanding balances of various categories of contractual receivables by the rates at which they are expected to flow-in up to an aggregate cap of 75% of total expected cash outflows.
