participate in any EOI/RFP issued by the Bank during a period of 2 (two) years from the date of debarment.

- If the Central Bureau of Investigation/CVC/C&AG or Vigilance Department of the Bank or any other investigating agency recommends such a course in respect of a case under investigation.
- Employs a Government servant or the Bank's Officer within two years of his retirement, who has had business dealings with him in an official capacity before retirement; or
- Any other ground, based on which the Bank considers, that continuation of Contract is not in public interest.
- If there is strong justification for believing that the partners/directors/proprietor/agents of the firm/company has been guilty of violation of the code of integrity or Integrity Pact (wherever applicable), evasion or habitual default in payment of any tax levied by law; etc.

#### (c) Banning from Ministry/Country-wide procurements

2	Solution should comprise of low interaction honeypot, medium interaction honeypot as well as high interaction honeypot. The solution should be capable of providing both virtual and physical honeypots. The solution should provide firewalls decoy, IDS/IPS decoy, WAF decoy & MZ decoy for LB, web server and a separate DMZ to deploy decoy Application and DB servers.	
3	VMs with Windows, Linux, Unix (different flavors of Unix) server can be used as part of solution to simulate such trap environment.	
4	Solution deployment must ensure that, it should be near impossible for the attacker to differentiate amongst real and trap systems (decoys).	
5	It should be able to capture network scanning attempts, application vulnerability exploitation, OS scan, Malwares, malicious file hashes, system hijack etc.	
6	The decoys should be scientifically placed in multiple subnets, so the hackers will encounter them in the process of trying to find valuable information. When the hackers try to access the decoys, a silent alert should be raised, and full forensics related to the attack should be collected. Decoy should be able to capture details such as attack vector used, attack methodology, tools used for attack, source of the attack etc.	
7	The solution based on the learnings should suggest solution to mitigate the risk.	
8	The decoy should act as real servers, desktops, files, users accounts, applications like SWIFT/NEFT/RTGS/Core banking, Internet Banking, Mobile Banking, Loan Systems, ATM Switch and any other system available in the Banks overall IT ecosystem by using them as traps.	
9	The solution should identify signature, behavior patterns and should also provide effective approach in detecting advanced attacks including malware-less attacks, bot attacks etc. that can circumvent existing preventive controls.	

		I
10	The proposed Deception solution should be seamlessly	
	integrate with the Bank's Active Directory and with SIEM	
	solutions and should provide monitoring and network visibility	
	as well as early detection of attacks while keeping false

	affected assets and any other existing or future solution, as	
	required by the Bank.	
11	Solution should be able to generate actionable intelligence and	
	should be able to integrate with existing threat intel platform	
12	Solution should have Centralized Management Console with	
	customizable dashboard and role-based admin.	
13	In case of complete compromise of decoy solution, it should	
	still not be able to launch attack on to the other system within	
	the environment.	
14	Ability to detect all types of attack vectors including but not	
	limited to: pre-attack reconnaissance, spear phishing attacks,	
	zero-day attacks, privilege escalation, lateral movement and	
	data-theft	
15	The solution must have the ability to visually replay past events	
	on an interactive fluid dashboard that show all decoy elements	
	and attacker details.	
16	Solution must allow visual dissection of the PCAP traffic and	
	preserve all network traffic to and from the decoys while	
	having the ability to export PCAPs based on a time filter.	
17	Solution must support Bank defined signature detection for	
<u> </u>	'known bad' events and must be updated with the latest	
	emerging threat signatures.	
18	Solution must use a numeric risk score for an attacker based on	
10	dynamic analysis of attacker behavior as well as categorization	
	as critical / high /medium / low buckets.	
19	The system must have the ability to save and share custom	
13	views filtered based on time and any event metadata for	
	-	
	analyzing specific events. Results of saved queries must be	
20	exportable.	
20	The solution must have the ability to reconstruct raw attack	
	data into plain English attack analysis. It must also provide	
	attacker / APT group attribution, mitigation recommendations,	
	MITRE mapping within the user interface for the analyst.	
21	Measures to enhance deception strength of decoys should be	
	in place like- Decoys should be integrated with the real Active	
	Directory domain and should not use a domain trust	
	relationship between a dummy Active Directory and the real	
	Active Directory domain that hackers can easily discover.	

		I
22	Ability to embed lures on real endpoints, without using an	
	agent, in the form of unique dummy credentials that lead	
	attackers on to decoy systems. They must be able to trigger	
22	action on Bank defined and configurable activities.	
23	The solution must support geo location of external threats.	
24	Deception platform should automatically fill network decoys	
	with realistic auto-generated enticing content containing	
	folders and files pertaining to all business verticals. The

	console alerts, the solution must have the built-in ability for	
	real-time voice phone calls and SMS alerts based on preset or	
26	custom notification rules.	
26	For security, the base operating platform (host operating	
	platform on which the decoys run) of the deception appliance	
	should not be on Linux or Windows which are prone to regular	
27	remotely exploitable vulnerabilities.	
27	When an event occurs, the solution should have built in	
	orchestration to take specific actions based on preset or user	
	specified rules that can be specified on any event meta-data.	
	The rule engine should support multiple Boolean and logical conditions to appropriately orchestrate the response. (Ability	
	to integrate with GRC tool and SOAR platform may be also	
	made a part of the same, to void duplicity and effectiveness of	
	counter response)	
28	Decoys must be very robust and shall never interfere with	
20	business functions/ objectives of the setup where they are	
	placed.	
29	Honeypot should be able to store attack data, visualize attack	
29	data. It should have capability of threat hunting and search	
	(CVE-Search, IP based search, Port based search, Hash value	
	based search etc.)	
30	Solution should be able to generate customized reports	
	(monthly, weekly, daily etc.), dashboards etc.	
31	Load Balancing requirements	
32	Customization as per requirements of the Bank.
